

Overlay Shares Short Term Bond ETF

Trading Symbol: (OVT)

Listed on NYSE Arca, Inc.

Summary Prospectus

January 11, 2021

www.overlayshares.com

Before you invest, you may want to review the Fund's Prospectus and Statement of Additional Information ("SAI"), which contain more information about the Fund and its risks. The current Prospectus and SAI, each dated December 31, 2020, are incorporated by reference into this Summary Prospectus. You can find the Fund's Prospectus, reports to shareholders, and other information about the Fund online at <https://www.overlayshares.com>. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

Investment Objective

The Overlay Shares Core Bond ETF (the "Fund" or "Core Bond ETF") seeks total return.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, sell and hold shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table an Example below.

Shareholder Fees (<i>fees paid directly from your investment</i>)	None
Annual Fund Operating Expenses (<i>expenses that you pay each year as a percentage of the value of your investment</i>)	
Management Fee	0.75%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.00%
Acquired Fund Fees and Expenses ^{1,2}	0.05%
Total Annual Fund Operating Expenses	0.80%

¹Estimated for the current fiscal year.

²Total Annual Operating Expenses in this fee table may not correlate to the expense ratios in the Fund's financial highlights (and the Fund's financial statements)(when available) because the financial highlights include only the Fund's direct operating expenses and do not include Acquired Fund Fees and Expenses, which represent the Fund's pro rata share of the fees and expenses of the exchange-traded funds in which it invests.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$82 **3 Years:** \$255

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund's performance. This rate excludes the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund's Shares and securities, including options, whose maturities or expiration dates at the time of acquisition were one year or less. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund (“ETF”) that seeks to achieve its objective by (i) investing in one or more other ETFs that seek to obtain exposure to the performance of short-term, investment grade, U.S. dollar-denominated, fixed-rate taxable bonds with a dollar-weighted average maturity of no more than three years with a maximum maturity of five years or directly in the securities held by such ETFs (collectively, the “Underlying Investments”) and (ii) selling and purchasing listed short-term put options (“put spreads”) to generate income to the Fund (the “Overlay Strategy”). Under normal circumstances, at least 80% of the Fund’s net assets, plus borrowings for investment purposes, will be invested, directly or indirectly through ETFs, in bonds.

The Fund’s Overlay Strategy seeks to generate income for the Fund by utilizing a “put spread” consisting of the sale of exchange-listed short-term put options (“Short Puts”) with a notional value (strike price times the value of the shares) up to 100% of the Fund’s net assets and the purchase of an identical number of short-term put options (“Long Puts”) with a lower strike price. The Fund seeks to generate income from the sale and purchase of put options with a lower strike price to hedge against a decline in the options’ underlying asset, the S&P 500 Index, which consists of approximately 500 leading U.S.-listed companies representing approximately 80% of the U.S. equity market capitalization.

A put option gives the purchaser of the option, in exchange for the premium paid, the right to sell the underlying asset at a specified price (“strike price”) at a specified date (“expiration date”). In contrast, the seller of a put option, in exchange for the premium received, is obligated to sell the underlying asset at the strike price on the expiration date. In the event the underlying asset declines in value, the value of a put option will generally increase. In the event the underlying asset appreciates in value, the value of a put option will generally decrease. The options sold by the Fund are expected to have an expiration date within one to two weeks of their purchase date. The strike price of the Short Puts will be less than the value of the S&P 500 Index at the time such options are sold, and the strike price of the Long Puts will be less than the strike price of the Short Puts. The difference between such strike prices is based on the Adviser’s judgment as to the level of expected volatility in the market prior to the options’ expiration. Because the Long Puts will have a lower strike price than the Short Puts, the Long Puts are not expected to completely protect the Fund from a decline in the value of the S&P 500 Index.

The Fund’s Overlay Strategy is designed to seek to generate a positive return in rising and flat equity markets, and may generate a positive return in equity markets that are modestly declining, assuming the net premium collected from the options sold and purchased exceeds the net cost to close the positions. In an effort to limit losses in declining equity markets, the Fund may reduce its sale of Short Puts and/or purchase of Long Puts with strike prices closer to the strike prices of the Short Puts.

The Fund focuses primarily on equity index options which offer both European settlement (*i.e.*, options can only be exercised at their expiration date) and cash settlement (*i.e.*, options carry an obligation by their seller to pay the difference between their strike price and their settlement value instead of allowing the seller to take delivery of securities).

The potential returns of the Fund are generally limited to the amount of cash (premiums) the Fund receives when selling Short Puts, net of any cash (premiums) paid by the Fund to purchase Long Puts, plus the returns of the Underlying Investments in which the Fund invests. The Fund’s sale and purchase of put options may result in the generation of positive returns for the Fund; however, the loss potential if the strategy is not effective may be greater than the profit potential. **The Fund may lose significantly more than the premiums it receives in highly volatile market conditions.**

The Fund will segregate cash and/or other liquid assets in an amount equal to the Fund’s obligations under each Short Put so that each option sold will be secured, or “covered.” The Adviser intends to limit the use of leverage by ensuring that the Fund’s potential obligations from the Short Puts will not exceed the Fund’s total net assets.

The Adviser employs a disciplined portfolio construction process that relies on guidelines to govern capital allocations based on a quantitative methodology designed by the Adviser to measure the perceived risk of the broad U.S. equity market. In making this determination, the Adviser considers various factors including but not limited to the overall volatility (rate of change) in the markets. The Adviser bases allocation decisions on a combination of quantitative risk metrics and a qualitative assessment of potential risk/reward scenarios, with the ultimate goals of mitigating the effects of volatility in the Fund’s portfolio and maintaining adequate portfolio diversification while seeking to achieve the Fund’s targeted return. The Adviser evaluates the metrics associated with the valuation of options, including volatility, time to expiration and the relationship of the exercise price to the prevailing market price of the reference asset. There can be no guarantee that the Adviser will be successful in implementing the Fund’s strategy. During market conditions in which market volatility rises, the price of options could rise, which, in turn, could have a detrimental effect on the Fund’s performance and achieving its targeted return.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s NAV, trading price, yield, total return and/or ability to meet its objective. The following risks could affect the value of your investment in the Fund:

- **Derivatives Securities Risk.** The Fund invests in options that derive their performance from the performance of the S&P 500 Index. Derivatives, such as the options in which the Fund invests, can be volatile and involve various types and degrees of risks, depending upon the characteristics of a particular derivative. Derivatives may entail investment exposures that are greater than their cost would suggest, meaning that a small investment in a derivative could have a substantial impact on the performance of the Fund. The Fund could experience a loss if its derivatives do not perform as anticipated, or are not correlated with the performance of their underlying asset or if the Fund is unable to purchase or liquidate a position because of an illiquid secondary market. The market for many derivatives is, or suddenly can become, illiquid. Changes in liquidity may result in significant, rapid, and unpredictable changes in the prices for derivatives.
- **ETF Risks.** The Fund is an ETF and it invests in other ETFs, and, as a result of its structure, is exposed directly or indirectly to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Cash Redemption Risk.* The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Funds (e.g., short positions, derivative instruments, and bonds that cannot be broken up beyond certain minimum sizes needed for transfer and settlement). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading.* Although Shares are listed for trading on the NYSE Arca, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Fixed Income Risk.**
 - *Call Risk.* During periods of falling interest rates, an issuer of a callable bond held by the Fund may “call” or repay the security before its stated maturity, and the Fund may have to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund’s income.
 - *Credit Risk.* Debt issuers and other counterparties may not honor their obligations or may have their debt downgraded by ratings agencies.
 - *Extension Risk.* During periods of rising interest rates, certain debt obligations will be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund’s income and potentially in the value of the Fund’s investments.
 - *Interest Rate Risk.* Interest Rate Risk. An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives.
- **Government Obligations Risk.** No assurance can be given that the U.S. government will provide financial support to U.S. government-sponsored agencies or instrumentalities where it is not obligated to do so by law, such as the Federal National Mortgage Association (“Fannie Mae”) and the Federal Home Loan Mortgage Corporation (“Freddie Mac”). Securities issued by Fannie Mae and Freddie Mac have historically been supported only by the discretionary authority of the U.S. government. While

the U.S. government provides financial support to various U.S. government-sponsored agencies and instrumentalities, such as Fannie Mae and Freddie Mac, no assurance can be given that it will always do so. In September 2008, at the direction of the U.S. Department of the Treasury, Fannie Mae and Freddie Mac were placed into conservatorship under the Federal Housing Finance Agency (“FHFA”), an independent regulator, and they remain in such status as of the date of this Prospectus. The U.S. government also took steps to provide additional financial support to Fannie Mae and Freddie Mac.

- **Implied Volatility Risk.** When the Fund sells an option, it gains the amount of the premium it receives, but also incurs a liability representing the value of the option it has sold until the option is either exercised and finishes “in the money,” meaning it has value and can be sold, or the option expires worthless, or the expiration of the option is “rolled,” or extended forward. The value of the options in which the Fund invests is based partly on the volatility used by market participants to price such options (*i.e.*, implied volatility). Accordingly, increases in the implied volatility of such options will cause the value of such options to increase (even if the prices of the options’ underlying stocks do not change), which will result in a corresponding increase in the liabilities of the Fund under such options and thus decrease the Fund’s NAV.
- **Market Events Risk.** U.S. and international markets have experienced significant periods of volatility in recent years due to a number of economic, political and global macro factors, including the impact of the coronavirus (COVID-19) pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. These developments as well as other events, such as the U.S. presidential election, could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets. As a result, the risk environment remains elevated.
- **Market Risk.** The trading prices of equity securities and other instruments fluctuate in response to a variety of factors. The Fund’s NAV and market price may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time.
- **Mortgage- and Asset-Backed Securities Risk.** The Fund may invest in U.S. government agency-backed mortgage- and asset-backed securities. Mortgage- and asset-backed securities are subject to interest rate risk. Modest movements in interest rates (both increases and decreases) may quickly and significantly reduce the value of certain types of these securities. When interest rates fall, mortgage- and asset-backed securities may be subject to prepayment risk. When interest rates rise, certain types of mortgage- and asset-backed securities are subject to extension risk. Mortgage- and asset-backed securities can also be subject to the risk of default on the underlying residential or commercial mortgage(s) or other assets
- **New Fund Risk.** The Fund is a recently organized management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Options Risk.** Selling (writing) and buying options are speculative activities and entail greater than ordinary investment risks. The Fund’s use of put options can lead to losses because of adverse movements in the price or value of the underlying asset, which may be magnified by certain features of the options. When selling a put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is below the strike price by an amount equal to or greater than the premium. Purchasing of put options involves the payment of premiums, which may adversely affect the Fund’s performance. Purchasing a put option gives the purchaser of the option the right to sell a specified quantity of an underlying asset at a fixed exercise price over a defined period of time. Purchased put options may expire worthless resulting in the Fund’s loss of the premium it paid for the option.

The value of an option may be adversely affected if the market for the option becomes less liquid or smaller, and will be affected by changes in the value or yield of the option’s underlying asset, an increase in interest rates, a change in the actual or perceived volatility of the stock market or the underlying asset and the remaining time to expiration. Additionally, the value of an option does not increase or decrease at the same rate as the underlying asset. The Fund’s use of options may reduce the Fund’s ability to profit from increases in the value of the underlying asset. If the price of the underlying asset of an option is above the strike price of a written put option, the value of the option, and consequently of the Fund, may decline significantly more than if the Fund invested directly in the underlying asset instead of using options. While the Fund will segregate liquid assets at least equal in value to the maximum potential loss for the Fund, the Fund could still lose a significant amount or nearly all of its value if the price of an underlying asset changes significantly enough.

Performance

Performance information for the Fund is not included because the Fund did not have a full calendar year of performance prior to the date of this Prospectus. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund’s website at www.overlayshares.com or by calling the Fund toll-free at 1-866-704-6857.

Portfolio Management

Adviser Liquid Strategies, LLC
Portfolio Managers Bradley Ball, Adam Stewart, CFA, Shawn Gibson and Justin Boller, CFA, have been portfolio managers of the Fund since its inception in January 2021.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the “bid-ask spread.”

Recent information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.overlayshares.com.

Tax Information

The Fund’s distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.
